

SCHOOLS MODEL DEFINED

The schools model is a way to organize full-credit academic programs. It is a common practice in post-secondary education, especially among polytechnics in Canada. Grouping like programs into schools, students will have learning opportunities with evolving interdisciplinary and interprofessional fields of study, and industry will more clearly understand our programming. In the Sask Polytech model, programs have been organized into eight schools in the economic sector and four schools in the public service sector.

- The **economic sector schools** reflect the broad sectors of our provincial economy.

 These economic sectors drive the industries and businesses that grow our economy
- The **public service sector schools** are those that support the drivers of the economy by providing the support services necessary for our economy and society to function.
