

# SASKATCHEWAN POLYTECHNIC TECHNICAL TRAINING AND APPRENTICESHIP

To become a certified journeyperson, you must find an employer to hire and indenture you as an apprentice in the trade.

## SASKATCHEWAN POLYTECHNIC PRE-EMPLOYMENT PROGRAM (ORANGE PATH)

Students with limited knowledge of a trade are encouraged to take a Sask Polytech program. By doing so, you will:

- Obtain a base knowledge and skills of the trade you wish to enter, giving you confidence when applying for jobs.
- Show a potential employer that you have made a commitment to the trade by taking the course.

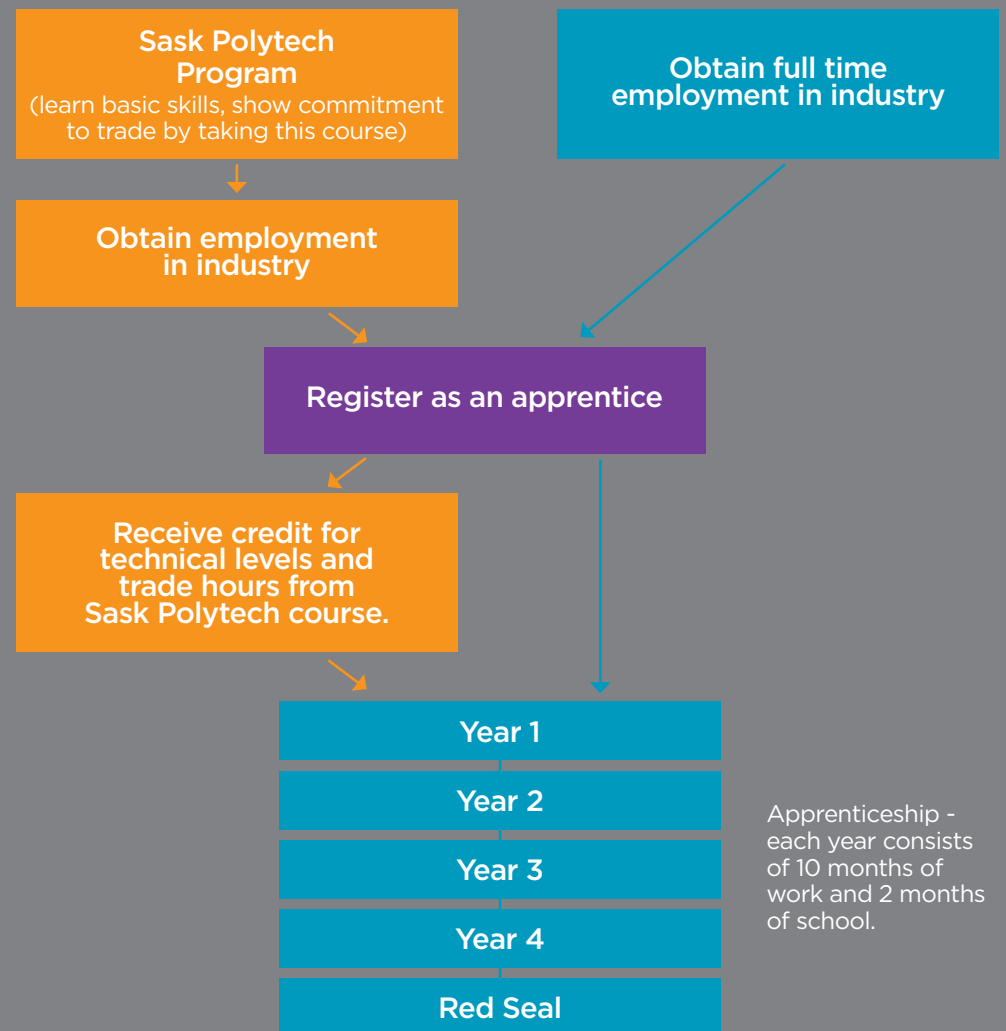

Taking the course better equips students to obtain full-time employment, enabling you to enter the Apprenticeship process (Blue Path). Upon entering apprenticeship, you may receive technical and hours credit for the course you completed at Sask Polytech.

## APPRENTICESHIP (BLUE PATH)

The employer, student and the SATCC sign an agreement indenturing the student as an apprentice in the trade. You then go through the apprenticeship training process which involves working 10 months with your employer learning on the job under the supervision of a Journeyperson. For 2 months, you will attend Saskatchewan Polytechnic to complete the required technical training. The length of the apprenticeship varies from trade to trade (see reverse).

Once the student has completed the required hours in the trade and has successfully passed all of the technical level exams, you will obtain a Certificate of Completion of Apprenticeship and a Journeyperson Certificate of Qualification. If you have experience in the trade, or have a relative, friend or connection that can lead to full-time employment in the trade, you can go directly into industry (blue path).
