No part of the work(s) contained herein may be reproduced or copied in any form or by any means – graphic, electronic, or mechanical, including photocopying, recording, taping of information and retrieval systems – without written consent of Saskatchewan Polytechnic.

Prior learning credit options at Saskatchewan Polytechnic

See [Get Credit for What you Know](#) for important information about all options to get credit for prior learning at Sask Polytech, including PLAR, transfer credit, Canadian Armed Forces credit, and equivalency credit.

How to navigate this document

This document contains links to other document sections or webpages. To return to where you were from another section in this document, press the *ALT* key and *left arrow* key at the same time. To return to this webpage from another webpage, close the other webpage or click back on the browser tab for this document.

Contents of this guide

This guide contains the following specific PLAR information and tools for this program

- A. [PLAR fees](#)
- B. [PLAR eligibility and options](#)
- C. [Dates when PLAR assessment is available](#)
- D. [Special directions for this program](#)
- E. [PLAR contact person](#)
- F. [Self-rating course outlines](#)

A. PLAR fees

Fees for PLAR challenges are set to cover our costs for consultation, assessment, and related administrative tasks. PLAR fees are non-refundable and non-transferrable.

The PLAR fees policy is subject to change for each new academic year. Please see the **Cost** section on the [PLAR webpage](#) for current fee information.

B. PLAR eligibility and options

To be eligible for PLAR for courses in this program, you must first apply for admission and be accepted into the program. You must also consult with the [PLAR contact person](#) and be approved for PLAR assessment.

Course prerequisites and corequisites

Some courses have one or more other courses that must be completed first (prerequisite) or at the same time (corequisite). See [course outlines](#) in this guide to identify any pre- or co-requisites for each course. Discuss with your [PLAR contact person](#) how to deal with courses with corequisites.

Block assessment

Some programs may assess a cluster of courses together in one block, which may save you time and effort. Ask the [PLAR contact person](#) whether there are any block assessment options in this program.

C. Dates when PLAR assessment is available

PLAR assessment for this program is available from Sept 1 to June 15 in each academic year.

All PLAR assessments must be completed by June 15 of each academic year.

D. Special directions for this program

1. **Review** the [PLAR process and FAQs](#) and the information in this guide.
2. **Self-rate** your learning for each course using the [Course Outlines](#) in this guide.
3. **Consult** with the [PLAR contact person](#) for PLAR approval. Be prepared to provide your resume, course self-ratings (see [section F](#)), and a partially completed [PLAR application](#). If you are approved for PLAR, the contact person will sign your PLAR application and explain next steps.
4. Apply for admission to the program. See [directions](#) for applying.
5. **Register** for PLAR at [Registration/Enrolment Services](#) once you have signed approval on your [PLAR Application Form](#). The PLAR fee will be added to your student account.
6. **Finalize** an assessment plan with your assigned assessor.
7. **Complete** assessment before your PLAR registration expires.

E. PLAR contact person

Contact one of the Program Heads below to arrange a consultation **after** you have read this guide and [general PLAR information](#) and rated yourself for each course (see next section). Consultation may be by phone, online, or in person. Be prepared to provide your resume, course self-ratings, and a partially completed [PLAR application](#). If agreement is reached to go ahead with PLAR, the contact person will sign approval on your PLAR application and explain the next steps. Admission to the program is required before you can register for PLAR.

Kaya Forest, Program Head
Saskatchewan Polytechnic, Moose Jaw
Phone: 306 – 691 - 8423
Email: forestk@saskpolytech.ca

F. Self-rating course outlines

Clicking on a course code below opens a page where you can rate yourself on the knowledge and skills assessed for PLAR credit. For Arts & Sciences courses, clicking on the course code opens another PLAR guide. The [PLAR contact person](#) for this program will refer you to another person to discuss PLAR for courses delivered by Arts & Sciences or another program/department.

COURSE CODE	COURSE NAME	Delivered by another department/program

PROJ 206	Capstone Project	
TCOM 104	Applied Research in Technology	Arts & Sciences

CADD 120 - Computer Aided Drafting 1

You will develop fundamental computer aided drafting (CAD) skills using industry-standard software. You will construct two-dimensional geometric construction, dimensioning and drawing output.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: none
Equivalent course(s): DRFT 105

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Demonstrate the Computer Aided Drafting (CAD) software and drawing environment.			
2. Demonstrate the use of foundational commands of CAD software.			
3. Construct basic geometric objects and annotations.			
4. Apply file management techniques and drawing templates.			
5. Perform editing techniques.			
6. Create drawings for output.			
7. Construct basic blocks.			
8. Employ hatching.			
9. Manage raster images.			

MAT 110 - Mathematics for Engineering Technologies

You will gain foundational knowledge of mathematical topics applicable to engineering technologies. You will study formula manipulations, factoring of algebraic expressions, geometry and trigonometry, exponents and logarithms, and functions and their graphs. This course is intended to build problem solving and critical thinking skills, and to prepare you for studies in calculus.

Credit unit(s): 4.0
Prerequisites: none
Corequisites: none
Equivalent course(s): MAT 100, MAT 101, MAT 110CE, MATH 182, MATH 193

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Examine measurements, formulas, and functions.			
2.	Practice mathematical operations with algebraic expressions.			
3.	Apply principles of geometry.			
4.	Analyze trigonometric functions and vectors.			
5.	Examine systems of linear equations.			
6.	Examine algebraic equations and functions.			
7.	Analyze exponential and logarithmic functions.			

MEAS 109 - Environmental Measurements

You will examine protocols for environmental sampling where you will learn about the collection, preservation and transportation of samples. You will collect field measurements and be introduced to statistical analysis as a means of managing measurement error. Emphasis will be placed on working safely. As such you will follow safe practices and will be required to assist in identifying risk and measures to reduce risk. An understanding of hazardous materials will be developed through working with content provided in Safety Data Sheets.

Credit unit(s): 4.0
Prerequisites: none
Corequisites: none
Equivalent course(s): MEAS 106

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Demonstrate safe practices while working in laboratory and field settings.			
2.	Examine the protocols related to environmental sampling.			
3.	Practice collecting samples in environmental matrices using accepted protocols.			
4.	Work effectively with collected data.			
5.	Analyze data using introductory statistical methods.			
6.	Practice documenting procedures and activities.			
7.	Examine the risks associated with hazardous materials.			

SEM 101 - Technology Seminars

Your orientation will include discussions regarding the role of technicians/technologists in the workplace and society. You will study time management skills, diversity in the workplace, principles of sustainability and safety requirements.

Credit unit(s): 1.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Develop study and time management skills.			
2. Recognize diversity in the workplace.			
3. Recognize principles of sustainability to work.			
4. Discuss professional ethics, responsibility, and accountability.			
5. Discuss the impact of technology on society.			
6. Describe workplace safety procedures.			

SRVY 120 - Surveying 1

You will receive an introduction to the basics of surveying. The course content includes horizontal measurements, levelling, angle and direction measurement, computations, traverses and drafting plans.

Credit unit(s): 4.0
Prerequisites: none
Corequisites: none
Equivalent course(s): SRVY 102

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Discuss survey fundamentals.			
2. Discuss various methods of measuring distances.			
3. Assess the errors associated with distance measurements.			
4. Measure the various ground distances.			
5. Practice various techniques of differential leveling in vertical control surveys.			
6. Create closed and open level loops with appropriate correction method.			
7. Discuss various types of traverse surveys.			
8. Calculate directions utilizing azimuths and bearings.			
9. Measure internal angles and horizontal distances in a closed traverse.			
10. Revise field/observed measurements of traverse.			
11. Determine the land location, and size, of a legal land description under the Dominion Land Survey (DLS) system and various coordinate systems.			
12. Apply the 'standard practice of surveying' in recording field notes with relevant sketches.			

TCOM 102 - Workplace Communication

You will examine the employability skills required in the workplace. You will discuss the communication process, and practice effective interpersonal communication techniques and conflict resolution. You will use workplace writing and job search skills.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: none
Equivalent course(s): COM 160, COMM 191, JOBS 190, JOBS 288, JOBS 290, TCOM 102CE, TCOM 120, TCOM 140, TMGT 180

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Examine fundamentals of workplace communication.			
2. Discuss conflict resolution techniques.			
3. Apply job-related interpersonal and oral communication strategies.			
4. Apply workplace writing skills.			
5. Use job search skills.			

TERR 101 - Engineering Geology

You will study physical geology including the origin, composition and characteristics of the major minerals and rock classifications. You will study geologic processes, landforms and geologic structures created by these processes referencing Saskatchewan's glaciated terrain.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: TERR 102
Equivalent course(s): TERR 121

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Describe the origin and physical characteristics of various rock and soil types.			
2. Describe the effects of mass wasting and running water on the landscape.			
3. Describe the origin of groundwater and the characteristics of wells.			
4. Identify various glacial landforms and how they are significant in terms of type of soil materials and origin.			
5. Describe the origin of deserts and how the landscape evolves.			
6. Describe the process of plate tectonics and the geological features associated with it.			
7. Describe crust deformation and mountain building processes.			

TERR 102 - Engineering Geology Laboratory

You will learn fundamental mapping concepts and about map reference systems. You will learn to read and extract information from topographic maps. You will be introduced to aerial photo interpretation as a tool to help identify natural surface features. You will study the characteristics of features formed by the advance and retreat of massive ice sheets during the last glacial period.

Credit unit(s): 2.0
Prerequisites: none
Corequisites: TERR 101
Equivalent course(s): TERR 121

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Describe the basic elements of a map.			
2. Describe the coordinate reference systems used in mapping.			
3. Describe the Western Canada Dominion Land Survey system.			
4. Describe the National Topographic System (NTS).			
5. Demonstrate proficiency reading a topographic map sheet.			
6. Observe the evolution of administrative boundaries within Canada in contrast with the pre-contact extent of First Nations' territories.			
7. Describe the characteristics of glaciated features observed on aerial photos.			

CAMP 104 - Environmental Field Work 1

Using the knowledge gained in previous courses, and supplemented with new field procedures, you will participate in field exercises related to baseline environmental assessment and characterization of a subject site. The results of your field exercises will allow you to identify the baseline environmental conditions of a subject site.

Credit unit(s): 4.0
Prerequisites: MEAS 109, ENVR 105, SOIL 102, GIS 110
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Employ safe practices while performing field work.			
2. Draw technical sketches.			
3. Collect topographic survey data using Global Positioning System (GPS) hardware.			
4. Present data as a topographic plan using Computer Aided Drafting (CAD) and Geographic Information System (GIS).			
5. Describe the requirements of an environmental monitoring program.			
6. Describe the appropriate protocol for collection of environmental samples.			
7. Conduct analyses for specified analytes using field kits.			
8. Perform checks and calculations to ensure data accuracy and integrity.			

ENVR 101 - Environmental Science and Technology 1

You will examine the natural world scientifically in an attempt to explain how life on earth is sustained. You will review human population development with its increasing resource requirements. You will study sustainable resource management applied to urban and natural environments including associated risks of hazardous materials. You will take a global perspective using objective risk analysis and environmental ethics.

Credit unit(s): 2.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Explain the relationship of increasing human populations and environmental effects.			
2. Explain risk analysis and its application to resource management.			
3. Describe sustainable development.			
4. Recognize the risks associated with harvest of renewable resources.			
5. Recognize the risks associated with harvest of non-renewable resources.			
6. Recognize the risks associated with the storage of hazardous materials and the disposal of municipal, industrial, and hazardous wastes.			

ENVR 105 - Environmental Site Assessment 1

You will acquire the knowledge needed to plan, design, organize and implement the first phase of an Environmental Site Assessment (ESA). During the Phase I ESA, you will collect current and historical site information and identify potential and actual environmental concerns associated with the subject site and the adjacent properties.

Credit unit(s): 3.0
Prerequisites: MEAS 109
Corequisites: ENVR 101
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Analyze the nature and scope of environmental problems with reference to relevant legislative requirements for environmental permits and approvals for construction projects.			
2. Interpret the site assessment framework.			
3. Discuss uses and principles of Phase I Environmental Site Assessments (ESA's).			
4. Discuss roles, responsibilities, and limitations of the Phase I ESA.			
5. Perform a Phase I ESA.			
6. Compose a Phase I ESA report.			

GIS 110 - Global Navigation Satellite Systems (GNSS) and Geographic Information System (GIS) Fundamentals

Your studies will focus on the fundamentals of Global Navigation Satellite Systems (GNSS) and a Geographic Information System (GIS). You will learn the components of a GNSS, its signal structure, and explore the effects that errors have on the system and its position accuracies. You will examine the different positioning modes available when using a GNSS (i.e. absolute, differential and real-time). Your fieldwork will involve using a GNSS for basic surveying applications. You will apply GIS tools for database management and mapping functionalities using data from existing government sources and GNSS surveys.

Credit unit(s): 4.0
Prerequisites: TERR 102
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Discuss 2D and 3D coordinate systems.			
2. Describe GIS concepts.			
3. Perform mapping with GIS.			
4. Perform GIS analysis.			
5. Discuss concepts of navigation and GNSS.			
6. Conduct GNSS Surveys.			

MAT 111 - Calculus for Engineering Technologies

You will gain knowledge of calculus topics applicable to engineering technologies. You will study derivatives, integrals and differential equations, and their applications. This course is intended to further build problem solving and critical thinking skills, and to demonstrate the importance of calculus in engineering practices.

Credit unit(s): 4.0
Prerequisites: MAT 110
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Examine the derivative through the study of slopes and limits.			
2. Calculate derivatives of functions.			
3. Use first and second derivatives to graph functions.			
4. Analyze technical problems involving rates of change and optimization.			
5. Examine the indefinite and definite integral.			
6. Calculate integrals of functions.			
7. Analyze technical problems with integration.			
8. Solve first-order differential equations.			

SOIL 102 - Soil Testing, Taxonomy and Classification

Your studies will focus on data collection, analysis and reports writings for the identification, classification, and determination of properties of earth materials. You will perform industry-standard test procedures on soil and aggregate. You will evaluate the methods and determine the results. Extending your knowledge of fluvial and glacial geomorphologic processes gained in previous courses, you will use this as a foundation for the study of soils and parent material from a Saskatchewan landscape perspective.

Credit unit(s): 4.0
Prerequisites: TERR 101
Corequisites: ENVR 101
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Describe geological processes, materials, and landforms in Saskatchewan.			
2. Describe soil, its components and various uses and approaches for studying soil classifications.			
3. Assess soil architecture and its physical properties.			
4. Discuss the soil forming factors and their relationship to soil.			
5. Classify soils using a hierarchical scheme the various classification systems.			
6. Perform American Society for Testing and Materials (ASTM) methods of soil testing.			
7. Discuss the uses and safe operation of a nuclear densometer.			

TCOM 103 - Technical Communication

You will use research skills to find technical information and cite it correctly. You will conduct effective meetings and produce supporting documents. As well, you will discuss technical report purposes and formats, write short technical reports and present technical information.

Credit unit(s): 3.0
Prerequisites: TCOM 102
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Conduct research for a technical report.			
2. Use correct grammar and technical style.			
3. Create technical reports.			
4. Conduct meetings.			
5. Present technical information.			

COOP 101 - Co-operative Work Term

Your co-operative education term will provide you with the opportunity to consolidate theoretical and practical concepts learned in the classroom and gain valuable experience in a work setting.

Credit unit(s): 0.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Develop personal employment search skills.			
2. Communicate in the workplace.			
3. Work as a member of the team.			
4. Demonstrate effective work habits.			
5. Become familiar with safe work practices.			
6. Develop personal management skills.			
7. Identify roles and responsibilities of personnel in the workplace.			
8. Assimilate learned theories and concepts in a workplace setting.			
9. Demonstrate essential skills.			

CHEM 200 - Engineering Chemistry

You will study the general principles of chemistry and chemical calculations. The concepts and application of stoichiometry, concentration determination, equilibrium, acid-base chemistry, pH, volumetric and gravimetric analysis will be used to describe the chemistry of aquatic systems.

Credit unit(s): 4.0
Prerequisites: MAT 110, MEAS 109 or MEAS 110
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.	Competent	Learning	None
1. Discuss the general principles of chemistry and their specific relationship to technology.			
2. Analyze the concepts, principles, and generalizations of chemical behaviour.			
3. Interpret the mathematical functions that express chemical relationships.			
4. Differentiate between the Gas Laws and their applications.			
5. Examine the structure of compounds relating bonding and molecular bonding to chemical and physical properties.			
6. Identify the various states of matter and the properties that attribute to these phases.			
7. Examine the factors that alter the equilibrium in a chemical reaction.			
8. Examine the theories of solubility and solution chemistry.			
9. Examine the nature, behaviour, concentration and strength of acids and bases.			
10. Apprise the indicators of chemical change utilizing the K _{sp} , K _w , and K _a theories.			
11. Apply oxidation numbers to identify redox reactions.			
12. Analyze the nature and behaviour of the atomic nucleus including radioactive isotopes and their practical application.			

ENVR 234 - Environmental Ecology 1

You will explore the mechanisms of evolution and the vast variety of life we see on earth. You will study how energy flows through ecosystems. You will explore the variety of ecosystems throughout Saskatchewan, Canada, and the World. You will cover the role of succession in shaping environmental landscapes.

Credit unit(s): 4.0
Prerequisites: ENVR 101, MEAS 109, SOIL 102
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Examine the mechanisms that drive the evolution of life on earth.			
2. Classify a variety of organisms based on their taxonomy.			
3. Outline how energy and nutrients flow through ecosystems.			
4. Discuss the trophic structure of ecosystems and the role that different organisms play in that structure.			
5. Compare primary and secondary succession.			
6. Classify ecosystems found throughout the world with a focus on the ecoregions of Saskatchewan.			

ENVR 236 - Environmental Monitoring

You will be introduced to the formation, taxonomy, and chemical properties of soils. You will learn about the relationships between terrestrial, riparian, and aquatic environments. You investigate various protocols to monitor and assess the health of each environment. Emphasis will be placed on demonstrating safe practices for outdoor field activities and laboratory settings. You will learn about the risks of various substances to environmental and human health.

Credit unit(s): 4.0
Prerequisites: ENVR 101, MEAS 109, SOIL 102
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Describe the components that contribute to watershed health.			
2.	Analyze the requirements of an environmental monitoring program.			
3.	Apply the appropriate protocol for collection of soil and water samples.			
4.	Select appropriate field tests for terrestrial and aquatic environments.			
5.	Operate equipment related to sample collection and field measurements.			
6.	Conduct analyses for specified analytes using field kits and standard methods.			
7.	Evaluate the results of measurements and analyses against applicable regulatory standards and guidelines.			
8.	Select appropriate mitigation measures to reduce or eliminate the environmental impacts of various construction and industrial situations that may be encountered in the role of an environmental monitor.			
9.	Analyze the results from a detailed site assessment of vegetation and soil as a requirement to evaluate the status of reclamation of a previously disturbed site.			

HYDO 201 - Groundwater Technology

You will discuss the principles of groundwater, drilling, design, and construction. You will also discuss the maintenance requirements of wells, groundwater protection and groundwater law.

Credit unit(s): 4.0
Prerequisites: MAT 111, SOIL 102
Corequisites: PHYS 104
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Explain the basic terms used in groundwater hydrology and hydrogeology.			
2. Analyze the properties of aquifers.			
3. Analyze the principles of groundwater flow.			
4. Evaluate groundwater flow to wells.			
5. Discuss soil moisture and groundwater recharge.			
6. Describe well drilling methods and fluids.			
7. Explain water well design.			
8. Describe well head protection.			
9. Design a groundwater monitoring program.			

LABS 202 - Environmental Laboratory Analysis

You will focus on learning the lab skills required to obtain water quality measurements. You will apply these skills to proper sampling protocol and laboratory analysis, with an emphasis on interpreting the laboratory results and applying them to applicable federal and provincial regulations and objectives.

Credit unit(s): 3.0
Prerequisites: MAT 110
Corequisites: CHEM 200
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Develop good laboratory practice in accordance with accepted principles of quality assurance and safety.			
2. Assess laboratory analyses using standard methods, Canadian Council of Ministers of the Environment (CCME) National Classification System for Contaminated Sites (NCSCS) and American Society for Testing and materials (ASTM) terminology.			
3. Conduct water quality analyses using Standard Methods.			
4. Conduct water quality analyses using field based instrumentation.			
5. Assess the suitability of field based methods compared to Standard Methods.			
6. Interpret the accuracy and precision of statistical data.			
7. Evaluate analytical results against applicable federal and provincial water quality regulations and objectives.			

PHYS 104 - Physics for Engineering Technologies

You will apply vectors and Newton’s laws of motion to force systems. You will study work, power, and the conservation of mechanical energy. You will study momentum and collisions. You will study the properties of static and dynamic fluids, thermal energy and heat. This course is also intended to build critical thinking and problem-solving skills.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Apply methods of vector addition to concurrent and non-concurrent force systems.			
2. Apply Newton’s laws to dynamic and static force systems.			
3. Analyze work, power, and the conservation of mechanical energy.			
4. Examine the conservation of momentum in collisions.			
5. Solve problems involving static and dynamic fluids.			
6. Solve problems involving temperature, thermal energy and heat.			

STAT 201 - Statistics for Engineering Technology

You will gain knowledge of statistical concepts and techniques applicable to engineering technology. You will study descriptive statistics, probability distributions, the Central Limit Theorem, inferential statistics and linear regression. This course is intended to build problem solving and critical thinking skills, and to demonstrate the importance of statistics in professional practices.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Define statistical terminology and procedures.			
2. Apply measures of central tendency to technical problems.			
3. Apply measures of dispersion and the Central Limit Theorem to descriptive statistics.			
4. Examine basic probability.			
5. Examine probability distributions of random variables.			
6. Apply the Normal Probability Distribution and the Central Limit Theorem to inferential statistics.			
7. Apply confidence intervals and tests of hypothesis to technical problems.			
8. Analyze paired statistical data using simple linear regression.			

COOP 201 - Co-operative Work Term

Your second co-operative education term will build on the experience gained during your first work placement and provide you with additional opportunities to develop skills and techniques related to your field of studies in a real work setting.

Credit unit(s): 0.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Participate in a personal employment search.			
2. Communicate effectively in the workplace.			
3. Contribute as a member of the team.			
4. Demonstrate effective work habits.			
5. Demonstrate safe work practices.			
6. Display personal management skills.			
7. Identify roles and responsibilities of personnel in the workplace.			
8. Apply learned skills and techniques in the workplace.			
9. Apply essential skills in the workplace.			

CAMP 204 - Environmental Field Work 2

Using the knowledge gained in previous courses, you will participate in field exercises related to environmental assessment and characterization of terrestrial and aquatic environments; including the sampling and monitoring of air, soil, sediment, surface water, and groundwater. The results of your field exercises will be applied to the characterization and evaluation of contaminant pathways and potential or actual risk(s) to identified receptors.

Credit unit(s): 4.0
Prerequisites: CAMP 104, ENVR 236, HYDO 201, GIS 110
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Perform topographic surveying of groundwater monitoring well casings to determine inferred groundwater flow.			
2. Conduct low-flow groundwater sampling			
3. Conduct subsurface soil vapour assessment.			
4. Perform slug tests to determine groundwater hydraulic conductivity.			
5. Analyze for common ground water, surface water, soil, and air quality parameters.			
6. Interpret laboratory analytical results of collected air, soil, water, and groundwater samples.			
7. Characterize an aquifer and aquatic environments using acquired data.			
8. Employ safe practices while performing field work.			

CAMP 205 - Boreal Field Work

You will participate in field activities within a boreal forest setting. You will become familiar with both the terrestrial and aquatic environments within the forest and be able to compare and contrast them to equivalent settings in a prairie landscape. You will also investigate an aquifer located in the sandy soils of a forest landscape.

Credit unit(s): 1.0
Prerequisites: none
Corequisites: CAMP 204
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Interact with a terrestrial ecosystem within a boreal forest setting.			
2.	Compare boreal wetlands to the wetlands previously explored in prairie landscapes.			
3.	Value the importance of aquatic and terrestrial ecosystems to the traditions and the sustenance of First Nations Communities.			
4.	Perform an aquifer test to determine aquifer properties.			

CHEM 201 - Environmental Chemistry

You will apply fundamental chemical principles acquired in previous courses, to environmental processes. You will learn to incorporate chemical principles in analyses of natural process as well as industrial and other anthropogenic impacts on air, water, and soil. You will also study how they apply to environmental monitoring, control, and analysis.

Credit unit(s): 4.0
Prerequisites: CHEM 200, LABS 202
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.	Competent	Learning	None
1. Apply organic nomenclature to chemical structures.			
2. Apply chemical principles to industrial processes.			
3. Evaluate the thermodynamics of processes as applied to Earth's systems.			
4. Examine chemical principles to understand natural processes in air, soil, and water matrices.			
5. Examine chemical principles to understand pollution in air, soil, and water matrices.			
6. Evaluate the impacts of emissions from industrial processes from a life cycle and sustainability perspective.			

ENVR 200 - Atmospheric Environment

You will be introduced to the basics of meteorology with a focus on natural and anthropogenic air pollutants, and their properties, sources, and effects on the atmosphere. You will learn how to set up meteorological and air monitoring equipment to test for atmospheric parameters and sample for the criteria air contaminants and other pollutants. The emphasis will be on the utilization of proper sampling protocols and procedures. The laboratory results will be compared to applicable federal and provincial ambient air quality regulations and objectives.

Credit unit(s): 4.0
Prerequisites: ENVR 236, PHYS 104
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Compare the characteristics of the various layers of the atmosphere.			
2. Explain the differences between energy, temperature, and heat and how they influence the behaviour of the atmosphere.			
3. Identify the meteorological parameters associated with weather.			
4. Measure meteorological parameters using various meteorological instruments.			
5. Analyse meteorological data and assess the influence atmospheric conditions have on air quality.			
6. Identify the sources, causes, and health implications of natural and anthropogenic derived air pollution.			
7. Analyze for criteria air contaminants and other air pollutants using air monitoring equipment including the selection of proper monitoring requirements, standards, and methods.			
8. Evaluate air monitoring results against applicable federal and provincial ambient air quality regulations and objectives.			
9. Assess the mechanisms that give rise to climate change.			
10. Conduct a greenhouse gas emission survey to evaluate climate change impacts from the activity.			

ENVR 205 - Environmental Site Assessment 2

You will acquire the knowledge needed to plan, design, organize and implement the second phase of an Environmental Site Assessment (ESA). During the Phase II ESA, you will demonstrate field procedures for the investigation of areas of potential environmental concern (APECs). You will design a field investigation plan to locate, sample, identify and monitor the contaminants of concern.

Credit unit(s): 3.0
Prerequisites: ENVR 105, ENVR 236, CAMP 204
Corequisites: CHEM 201
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Discuss roles, responsibilities, and limitations of Phase II Environmental Site Assessments (ESAs).			
2. Establish a Phase II ESA site investigation checklist.			
3. Design a site investigation plan for areas of potential environmental concern (APECs).			
4. Prepare a Project Management Plan (PMP) for the Phase II ESA site investigation.			
5. Conduct a Phase II ESA site investigation.			
6. Evaluate site specific information gathered to select appropriate environmental quality guidelines (EQGs) applicable to the subject site.			
7. Evaluate a contaminated site utilizing the Canadian Council of Ministers of the Environment (CCME) National Classification System for Contaminated Sites (NCSCS).			
8. Propose a Conceptual Site Model (CSM) containing contaminant sources, exposure pathways, and receptors.			
9. Compose a Phase II ESA report complete with NCSCS site score and CSM.			

ENVR 206 - Energy Resource Management

You will examine the major components of energy management including supply, demand, regulation, and environment. You will explore the concepts and principles behind successful energy management involved in the economic, environmental, and social implications of building operations and systems management. The course will also cover global energy systems, the environmental impacts of alternative energy sources, and Canadian energy issues.

Credit unit(s): 3.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Describe how the major components of energy management are interrelated.			
2. Identify the major global energy systems.			
3. Evaluate conventional and alternative energy systems.			
4. Evaluate the impact of conventional and alternative energy sources from an environmental perspective.			
5. Assess the potential of Canadian sources of energy.			
6. Assess residential and commercial operations from a systems management perspective.			
7. Evaluate policy implications of energy management systems.			

ENVR 235 - Environmental Ecology 2

You will study the ecology of aquatic and terrestrial ecosystems. You will be introduced to how populations grow and change and how this information is used to make management decisions. You will explore the impacts of humans on the environment. You will be introduced to a variety of local flora and fauna.

Credit unit(s): 3.0
Prerequisites: ENVR 234
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Examine the biotic and abiotic components of freshwater environments.			
2. Evaluate a freshwater ecosystem in terms of its biotic quality.			
3. Examine the various components of a marine ecosystem.			
4. Relate an understanding of population ecology to decisions of wildlife managers.			
5. Examine human impacts on terrestrial and aquatic environments.			
6. Contrast the pros and cons of a variety of management practices utilized in terrestrial ecosystems.			
7. Identify various species of local flora and fauna.			
8. Consider the implications of developments on "Species at Risk".			

HYDO 202 - Hydrology

This course provides you an overview of hydrological processes, measurement techniques, and data analysis. You will study the movement of water in the hydrologic cycle via precipitation, interception, evapotranspiration, surface runoff, infiltration, soil moisture, groundwater flow and streamflow. Your studies will include applied aspects and local examples.

Credit unit(s): 3.0
Prerequisites: MAT 110, PHYS 104
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Identify the practical significance of the hydrologic cycle.			
2. Illustrate the unique properties associated with water and the effect of water on climate.			
3. Analyze how precipitation is measured and recorded for a given watershed.			
4. Analyze point precipitation in order to obtain mean precipitation values and intensities.			
5. Compute aerial precipitation using the Mean Precipitation, Thiessen Polygon and Isohyetal Method.			
6. Determine various physical characteristics of watersheds using information from topographical maps.			
7. Describe the storage, movement, and supply of groundwater as well as factors which contribute to groundwater quality.			
8. Use unit hydrographs to predict design stream flows and appreciate flood control methods.			
9. Solve open channel flow problems.			

ENVR 203 - Liquid and Solid Waste Management

You will develop an understanding of the design basis of unit treatment processes and networks planning in municipal, industrial, and solid waste fields. Based on the skills you develop, you will design and plan a treatment facility in wastewater or solid waste landfill using best management practices. You will apply your skills in management and planning of domestic and industrial hazardous waste problems, impacts, and treatment/disposal.

Credit unit(s): 3.0
Prerequisites: CHEM 200, HYDO 201, PHYS 104
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Analyze the various environmental parameters contributing to municipal and industrial waste treatment and solid waste design.			
2.	Assess a combination of treatment processes to fulfill treatment requirements.			
3.	Design the appropriate wastewater treatment process for municipal, agricultural, and industrial uses.			
4.	Design wastewater sewer networks and their components.			
5.	Assess municipal and industrial solid waste management systems.			
6.	Design an appropriate wastewater and/or solid waste management facility using applicable environmental regulations and guidelines.			

ENVR 207 - Remediation and Reclamation

You will plan, design, organize and propose different types of environmental remediation techniques using the results of your previous Phase I and Phase II Environmental Site Assessments (ESAs). You will use gathered information and knowledge in the application of remediation techniques including bioremediation, barrier systems, mechanized systems, and excavations.

Credit unit(s): 3.0
Prerequisites: ENVR 205, ENVR 236
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Discuss the fundamentals of Phase III Environmental Site Assessments (ESAs).			
2. Compare remediation and reclamation.			
3. Explain the requirements for erosion control, re-vegetation, waste management, and soil stripping/storage/replacement.			
4. Apply applicable provincial reclamation criteria and guidelines to disturbed mining, oil and gas, and industrial sites.			
5. Develop a reclamation plan for a disturbed site.			
6. Discuss types of remediation technology and their in situ and ex situ application.			
7. Examine the ways and means of Risk Based Closure (RBC) options.			
8. Compare various remediation technologies including, but not limited to, RBC options, biological, mechanized, barriers, pump and treat, and excavation.			
9. Propose a remediation project by selecting an appropriate remediation technology.			
10. Calculate anticipated costs to implement chosen remediation technology and include timeline for completion of site remediation.			
11. Prepare a Corrective Action Plan (CAP).			

ENVR 228 - Environmental Management

You will study the environmental project management elements of environmental liability, accountability, and due diligence in terms of risk assessment and risk management, Occupational Health and Safety, and emergency response planning. You will learn how to apply environmental management systems using the International Organization for Standardization (ISO 14000 series).

Credit unit(s): 3.0
Prerequisites: ENVR 101, CHEM 201
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Identify the applicable environmental regulations and guidelines.			
2. Evaluate industry stewardship, accountability, and due diligence to minimize environmental liability.			
3. Evaluate Occupational Health and Safety (OH&S) program for compliance with OH&S Legislation.			
4. Design an effective corporate pollution prevention plan.			
5. Design an effective environmental management system.			
6. Evaluate emergency response planning.			

ENVR 229 - Environmental Impact Assessment

You will learn about the evolution of the environmental impact assessment process in Canada and in particular, Saskatchewan. The environmental impacts associated with various industry activities will be explored. The components of an Environmental Impact Statement will be reviewed. You will learn how to evaluate an area for environmental sensitivities and how to mitigate potential impacts of proposed activities. You will complete several exercises that will assist in the preparation of a preliminary environmental impact report or environmental protection plan.

Credit unit(s): 4.0
Prerequisites: ENVR 235, ENVR 236, HYDO 202
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Examine the environmental impact assessment (EIA) process.			
2.	Conduct an inventory of resources for an EIA.			
3.	Analyze available spatial data using land based (GIS) software.			
4.	Assess potential environmental impacts of proposed activities.			
5.	Design a preliminary mitigation plan.			
6.	Evaluate processes for public consultation.			
7.	Analyze the results of a preliminary EIA.			
8.	Identify the challenges faced by First Nations communities as it relates to development and the importance of the "Duty to Consult" when developing environmental policies.			

HYDO 200 - Contaminant Hydrogeology

You will discuss the technical, theoretical, and practical aspects of contaminant hydrogeology including sources of contamination, mechanisms of groundwater flow and contaminant transport. In addition, you will study modeling approaches and common field practices.

Credit unit(s): 3.0
Prerequisites: CHEM 201, ENVR 205, HYDO 201
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Explain groundwater contamination.			
2. Model 2D and 3D groundwater and contaminant flow.			
3. Solve solute transport by advection.			
4. Solve solute transport by diffusion.			
5. Estimate advection-dispersion transport and models.			
6. Describe chemical mass transfer process.			
7. Describe multiphase flow and hydrocarbon recovery.			

MGMT 212 - Project Management

The course provides you an understanding of project organization, management, and contracting particularly as it relates to environmental consulting and practice. You will also learn how a typical project is organized, awarded, managed, and completed through the tendering and bidding process, as well as the roles and requirements of all parties involved. You will practice scheduling, resource allocation, financial analysis, and estimating. You will estimate the cost for a project and prepare a project bid according to specifications.

Credit unit(s): 4.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

Use a checkmark (✓) to rate yourself as follows for each learning outcome		Competent	Learning	None
Competent:	I can apply this outcome without direction or supervision.			
Learning:	I am still learning skills and knowledge to apply this outcome.			
None:	I have no knowledge or experience related to this outcome.			
1.	Describe the legal context for construction contracts within the framework of the Canadian legal structure.			
2.	Assess the components of a typical contract using the Canadian Construction Documents Committee standards.			
3.	Describe the different alternative dispute resolution methods as they relate to typical construction disputes.			
4.	Analyse the impacts of constrains, delays, and optimization on project planning and scheduling.			
5.	Use project management software to plan and schedule a project.			
6.	Calculate the present and future values of capital, and financing costs using a variety of engineering economics principles.			
7.	Develop project requirements using a work breakdown structure.			
8.	Evaluate the tendering process including the use of surety bonding.			
9.	Prepare a bid on a project based on tender documents.			

PROJ 206 - Capstone Project

You will apply the engineering concepts and principles to develop a significant initiative or project. Working individually or in small groups, you will use interpersonal, problem solving, and project management skills to propose, conceptualize, design, and demonstrate an engineering project that is both significant and relevant to your field of practice. You will manage and schedule the project with minimal direction. You will develop a presentation appropriate for an industry client and demonstrate the communication skills necessary to defend the technical specifications and the relevance of project in relation to the initial engineering problem.

Credit unit(s): 2.0
Prerequisites: none
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	<p>Competent</p>	<p>Learning</p>	<p>None</p>
<p>1. Propose a project and research the technical and design aspects required to complete the project.</p>			
<p>2. Manage scheduling to ensure timely completion of the project.</p>			
<p>3. Collect data required per the project proposal.</p>			
<p>4. Analyze the project and provide solutions to project design.</p>			
<p>5. Prepare a final report.</p>			
<p>6. Defend project conclusions in a technical presentation.</p>			

TCOM 104 - Applied Research in Technology

You will develop a technical proposal and apply advanced research skills to a technical problem. You will use the technical problem-solving process in an applied research project and present your research findings in a written report and oral presentation.

Credit unit(s): 2.0
Prerequisites: TCOM 103 or ENGL 101
Corequisites: none
Equivalent course(s): none

<p>Use a checkmark (✓) to rate yourself as follows for each learning outcome</p> <p>Competent: I can apply this outcome without direction or supervision. Learning: I am still learning skills and knowledge to apply this outcome. None: I have no knowledge or experience related to this outcome.</p>	Competent	Learning	None
1. Develop a technical proposal.			
2. Apply advanced research skills.			
3. Describe the technical problem-solving process.			
4. Employ the problem-solving process in an applied research project.			
5. Present research findings.
